

Introduction to Data Science Toolbox Group Sprint 0

We all decided to collaborate together on the Wisconsin Breast Cancer Data set. We wanted to see how different things we learned in lectures applied so we split up individually to see what grounds we can cover. In the report you will see us trying to navigate the data set, find ways to explore it and clean it, as well as learn about and play with code to (as a group) learn new methods in Data science. We will explore Cross-Validation, Decision Trees, Random Forests and other general methods to familiarise ourselves with.
